Abstract (en)

[origin: WO2017098162A1] The invention relates to a device (3) for securing a parcel (2) at a destination, comprising: a strip (7) comprising a first part (8) opposing a second part (9) that can be inserted into a slot (4); a tongue (10) pertaining to the second part and designed to prevent the removal of the second part when it is inserted in the slot; a channel (11) extending over both the first part and the second part and designed to receive a connecting means (20); an inlet (12) pertaining to the second part, which at least partially merges with the channel and allows the connection means to enter said channel such that, when the second part is inserted in said slot, the connection means is arranged in the channel in the area of the portion thereof located in the first part.
