Abstract (en)
[origin: EP3222182A1] In a floor care nozzle comprising a nozzle housing (HS), a mass (m) is vertically movable within the nozzle housing (HS). Preferably, the nozzle housing (HS) is provided with a damping element (DE) at a place where the mass (m) collides with the nozzle housing (HS), or the mass (m) is provided with a damping element (DE). Preferably, a total weight of the mass (m) is at least about 10% of a weight of the nozzle. Preferably, the mass (m) comprises a plurality of masses (m) distributed over a width of the nozzle housing (HS), wherein the number of masses (m) could be at least 3 and at most 6. Preferably, the nozzle housing (HS) comprises a plurality of containers (C) in which respective masses (m) can move, which are advantageously placed at a front end of the nozzle housing (HS).
