Abstract (en)

[origin: WO2017097510A1] The invention relates to a method for operating a braking mechanism (1), wherein an actuator (7) comprising an electric motor (8) is controlled in such a way as to move an actuator element (10) into a predefined position; upon completion of the controlling action on the actuator (7), at least one motor coasting variable is measured; and on the basis of the measured motor coasting variable, it is verified whether the actuator element (10) has moved into the predefined position.
