Abstract (en)

[origin: WO2017098349A1] A cartridge (10) for the preparation of a liquid product by means of liquid and/or steam introduced into the cartridge (10) comprises a casing (14) having inside it a first receiving chamber with a filling of a first substance (S1) for preparation of said liquid product. The casing has a bottom wall (142) through which the liquid product is able to flow out of the cartridge (10), with said bottom wall (142) having, if viewed from outside the cartridge (10), a protruding central portion (1420) having inside it a second receiving chamber with a filling of a second substance (S2) for preparation of said liquid product. Applied on the bottom wall (142) is a laminar filter element (180) that separates the first receiving chamber from the second receiving chamber. The bottom wall (142) has at least one opening (1428) for outflow of said liquid product from the cartridge (10) located in the protruding central portion (1420), coupled to which is a further filter element (182).
