Abstract (en)
[origin: WO2017097476A1] The present invention relates to a household appliance (100) having a main body (101), an appliance door (105) for closing the main body (101), a door lock (123) for locking the appliance door (105) in the closed state, wherein the appliance door (105) exerts a restoring force (133) on the door lock (123) in the closed state, a signal emitting device (121) for emitting a signal, and a controller (119) for controlling the signal emitting device (121). The door lock (123) has a restoring element (131) for picking up the restoring force (133). The controller (119) is configured to activate the signal emitting device (121) for emitting a signal when the restoring force (133) picked up exceeds a restoring force threshold.
