Abstract (en)

[origin: WO2017097433A1] The invention relates to a modular window structure comprising profiles (1) of jambs to be joined to profiles of cross-members, thereby supporting glazing panels, in addition to two sets of respectively vertical (3) and horizontal glazing beads which hold the panels in place and cooperate with elastically deformable seals (J), said glazing beads (3) each having a U-shaped section (3a) in which there is at least one fastening element (310, 320) cooperating by means of elastic deformation of the seals (J) and reversible click-locking with at least one holding element (10) located on a side (11) of said profiles, which is designed to be covered by the U-shaped section of said glazing beads.
