Abstract (en)

[origin: EP3179428A1] This invention relates to a communication system which is adapted to receive payment data (300) and to communicate with a remote server (302) in order to carry out a payment transaction. The communication system comprises a local kernel (304) configured to implement a subset of functions of a payment kernel, the payment kernel functions being distributed between said local kernel (304) and a remote kernel (305) located on a remote server so that payment data are processed securely by the remote server and not by the communication system.
