Abstract (en)

[origin: WO2017098130A1] The invention relates to a stand-alone lighting and electric power supply device comprising at least one renewable energy source (4), an energy storage means (21), a lighting source (5), and at least one energy output (8 to 11) controlled by a numeric activation module (23) that communicates with a server via a radio communication means. The device comprises a plurality of energy outputs (8 to 11), each of said outputs (8 to 11) being controlled by numeric data items that are each assigned to a specific user account.
