Abstract (en)
A modular component (1) for sectional furniture is provided with a supporting structure (2) and a drawer (10), coupled to the supporting structure (2) so as to slide along a horizontal axis (12) between a retracted position and a pulled-out position; the drawer (10) has a horizontal support wall (13), which defines from below a front compartment (16) and at least one rear compartment (19) distinct from each other; the rear compartment is accessible only when the drawer (10) is in the pulled-out position and is axially defined by a first and by a second vertical wall (14, 15), which are arranged on the support wall (13) transverse to the longitudinal axis (12); a third vertical wall (17) is arranged on the support wall (13) between the first and the second vertical wall (14, 15), while coupling elements (5) are provided for fastening the supporting structure (2) to adjacent modular components during the construction of the piece of furniture.
