Abstract (en)  
[origin: EP3388586A1] A flushing device (1) for a flush tank comprises a support structure (2) extending along an axis (A); a valve body (3) extending and sliding along the axis (A) in the structure (2); an actuating mechanism (4) connected to the valve body (3) for raising the valve body (3) to two different heights; and a pair of movable floats (5A, 5B), selectively connectable to the valve body (3) for operating respective flush modes; the floats (5A, 5B) are provided with respective triggers (63A, 63B) rotatably hinged to respective floats (5A, 5B) and to the structure (2); the triggers (63A, 63B) are provided with respective joint members (68) cooperating with respective abutment portions (69) of the valve body (3) for axially fastening the valve body (3) selectively to either one or the other of the floats (5A, 5B) and releasing the valve body (3) from the floats (5A, 5B).
