Abstract (en)
[origin: CN108695629A] The application discloses a device (1) which mechanically holds a bundle (8) of conductive wires, that is connected to a connector (9). The device includes a first surface (2) and a second surface (3) opposite thereto; a first fixing section (4), which is configured to hold and press the bundle of conductive wires against the first surface; a second fixing section (5) on the second surface, which is configured to be a fixing indicator (7); a third fixing section (6) which is configured to fixedly press the conductor (9) against the first surface (2).
