Abstract (en)  
[origin: CA3006392A1] A wringer device (1) for a mopping unit, comprising a basket-like receptacle (2), which is arranged in a rotatable manner in a holder (3), wherein the receptacle (2) can be made to rotate via a mechanical drive (4), wherein the drive (4) has a lever (5) which is mounted in a movable manner in the holder (3) and is provided with a spindle nut (6) which, when the lever (5) moves, causes a spindle (7) to rotate, wherein a first gearwheel (8) is arranged in a rotationally fixed manner on the spindle (7), wherein the axis of rotation (9) of the receptacle (2) is assigned a second gearwheel (10), wherein the axis of rotation (9) and second gearwheel (10) have arranged between them a freewheel (11), which permits transmission of torque to the axis of rotation (9) only in one direction of rotation, and wherein a toothed belt (12) is arranged between the first gearwheel (8) and the second gearwheel (10).
