Abstract (en)

[origin: WO2017102772A1] The invention relates to an ophthalmological diagnostic and/or therapeutic system (1) comprising a main part (2), an articulated arm (4-1, 4-2) connected to said main part (2), a diagnostic and/or therapeutic device (5-1, 5-2), a control device (6) and a movement device (7). The aim of the invention is to disclose an ophthalmological diagnostic and/or therapeutic system (1) which allows simple yet optimally protected movement of such a complex system (1) in different system-standard situations. This problem is solved by virtue of an ophthalmological diagnostic and/or therapeutic system (1) comprising a handle structure (8) that encircles the main part (2) at a distance.
