Abstract (en)

[origin: WO2017102532A1] Disclosed is a hand-held power tool (100) comprising a drive unit that has at least one gear-shift transmission which can shift at least between two different gear steps; a striking mechanism that can be activated for performing a striking mode is associated with the drive unit; a shifting unit (205) is provided for shifting the gear-shift transmission between at least two different gear steps and/or for activating/deactivating the striking mechanism, and a communication interface (1050) is provided for communicating with a user-actuated user guiding unit (115) and is designed to receive shifting instructions from the user guiding unit (115) in order for the transmission to shift in an application-specific manner between the two different gear steps and/or for the striking mechanism to be activated/deactivated.
