Abstract (en)
[origin: WO2017102961A1] The invention relates to an elevator cab (1) and to an elevator system (7) equipped therewith. The elevator cab (1) has a floor, a roof (11), and a plurality of side walls (13), wherein the side walls (13) define an outer contour of the elevator cab (1) in a top view of the elevator cab (1). The elevator cab (1) also has a plurality of elongate safety bars (21), which protrude outward beyond the outer contour of the elevator cab (1) from the roof (11) with the longitudinal extension direction of said safety bars transverse to an edge (25) of the roof (11). The safety bars (21) can therefore locally block a free space (23) between the elevator cab (1) and walls (19) of an elevator shaft (5) in order to prevent, for example, a person located on the roof (11) from falling through said free space (23).
