Abstract (en)

[origin: WO2017102460A1] The invention relates to a floor cover (1) of an escalator or a walkway. The floor cover (1) has a floor cover support (12) and at least one cover element (2, 3, 4, 5, 6). The opening of a space (113, 114) provided under the floor to the surrounding floor (115) which can be walked on can be closed in a flush manner by means of at least one cover element (2, 3, 4, 5, 6) which lies on the floor cover support (12). The floor cover (1) includes at least one device (20, 30, 40, 50, 60) by means of which one single possible correct installation position (X0) of the at least one cover element (2, 3, 4, 5, 6) on the floor cover support (12) is specified. In the correct installation position (X0), the cover element (2, 3, 4, 5, 6) lies flush on the floor cover support (12), and in an incorrect installation position (X1), at least one part of the cover element (2, 3, 4, 5, 6) is arranged so as to visibly project beyond the floor cover support (12) by means of the device (20, 30, 40, 50, 60).
