Abstract (en)  
[origin: WO2017101901A1] The invention relates to a motor vehicle door lock which is formed having a locking mechanism (2, 3) substantially comprising a rotary latch (2) and pawl (3) as locking mechanism components (2, 3). In addition, at least one lever is implemented as a constituent part of an actuating and/or locking lever chain. The motor vehicle door lock also has at least one bearing pin (4) for supporting the relevant locking mechanism component (2, 3) and/or the lever in a housing (1). Also provided is a bearing sleeve (5, 6, 7), which can be inserted into an opening (9) in the locking mechanism component (3) and/or the lever and is built up from at least two sleeve elements (5, 6) for the bearing pin (4). According to the invention, one sleeve element (5) has a socket (5a) reaching through the opening (9). The socket (5a) engages in a substantially dimensionally stable manner in a plug receptacle (6a) of the other sleeve element (6).
