Abstract (en)

[origin: EP3392109A1] A method is provided which comprises: acquiring, from a set of ranging sensors (10), recognition information about a plurality of parked vehicles existing in a parking frame group comprising a plurality of parking frames arranged side by side; selecting representative points (P1) of the parked vehicles from the recognition information; calculating a distance (D) between representative points that is a distance between the representative points (P1) adjacent to each other; and calculating a width of the parking frames on the basis of the distance (D) between representative points.
