Abstract (en)
The present application describes a double-body container for cooling beverages and/or for prolonged preservation of beverages at a low temperature, comprising an inner body (1) and an outer body (2) integrally made of metallic material, for example aluminum, wherein both have a flap surrounding their mouths, the flap of the inner body (3) juxtaposing the flap of the outer body (4) - the latter acting as a stop of the former, the two forming, by means of a connection process, a rim which perfectly fixates the two bodies. The container further comprises a chamber (8) between those two bodies, inaccessible and perfectly sealed, with an available volume circumscribed by the outer wall of the inner body (9) and by the inner wall of the outer body (10) and wherein said volume is filled, although not completely, by a sponge (11) impregnated with a fluid.
