Abstract (en)

The present invention relates to a bracket arrangement for supporting a vehicle component, said bracket arrangement comprising an elongated bracket comprising a bracket surface, said bracket surface extending in a first, axial direction and in a second, at least partially circumferential direction, wherein said bracket surface comprises an inner surface arranged to face and at least partially enclose said vehicle component; a flexible heating layer connected to the inner surface of the elongated bracket, said flexible heating layer comprising integrated electrical heating means for heating the vehicle component; and a heat insulating layer sandwiched between the inner surface of the elongated bracket and the flexible heating layer.
