Abstract (en)

The invention relates to a security system (8) for a land vehicle (1) used in transportation of valuable goods. The security system (8) comprises a camera system (2) installed on the land vehicle (1) for capturing images around the land vehicle (1). The security system (8) is characterized in that, it comprises a control center (5) allowing the land vehicle (1) to be tracked remotely and to intervene on the land vehicle (1) remotely, a communication unit (46) found on the land vehicle (1) and allowing two-way communication and information exchange with the control center (5) via wireless communication, a control unit (49) found on the land vehicle (1) for examining the captured images using image processing technique, deciding whether there is an emergency or not depending on the result of the examination, and transmitting the emergency information to the control center (5) by means of the communication unit (46) in case emergency decision is made.
