Abstract (en)
[origin: WO2017111782A1] The present disclosure is directed to a protective facemask (100) absent of a nose wire that can be used in multiple applications, particularly in the medical field. The facemask includes a body having a top edge (124) and a bottom edge. The top and bottom edges cooperate with each other to define a periphery that contacts a wearer's face. Further, the top edge includes a treated zone (106) containing a surface coating (108). The surface coating contains a non-metal malleable material that can be manipulated so as to retain a shape that fits contours of the wearer's face.
