Abstract (en)  
[origin: WO2017108101A1] A refrigerated sales furniture (10) is configured for providing a flow of cold air (C) flowing substantially vertically in a downward direction in at least a lower front portion of a refrigerated sales space (28) and along the inside of a lower portion of at least one door (8). The refrigerated sales furniture (10) comprises at least one warm air channel (17) extending below the at least one door (8) from a front side of the refrigerated sales furniture (10) into the refrigerated sales furniture (10). The warm air channel (17) is configured for flowing warm air from an area in front of the refrigerated sales furniture (10) into the refrigerated sales furniture (10) and for keeping the temperature at a lower portion of the at least one door (8) above the dew point temperature. The refrigerated sales furniture (10) is configured such that the flow of warm air (W) is sucked through the at least one warm air channel (17) by the flow of cold air (C) and merges with the flow of cold air (C).
