Abstract (en)
[origin: CA3009091A1] The invention relates to an implant (1) for attaching to a bone (10) with a support structure (2), which comprises at least one securing portion (3) which follows the bone outer structure and is to be attached to the bone (10), wherein a base (4) for receiving a prosthesis directly or by using an intermediate part (abutment) projects from the support structure (2). In addition, the invention also relates to a method for producing an implant (1), comprising the step of capturing individual patient data, and creating the support structure (2) and/or the base (4) on the basis of individual patient data.
