Abstract (en)
[origin: WO2017109304A1] The invention relates to a postal sorting apparatus for sorting flat postal items (P), including a postal sorting machine (1), a conveyor (7A) for open-top storage bins (5) that are filled with flat-stacked postal items, a conveyor (7B) for open-front shuttle bins (8) which are generally dihedral and in which the postal items are arranged edgewise in a stack, and a bin exchanger (7) that is capable of automatically transferring the flat-stacked postal items in an open-top storage bin to an open-front shuttle bin, the supply inlet (2) including a destacker with a fork-shaped magazine having teeth each of which is made up of a motor-driven belt, the shuttle bin and the fork-shaped magazine being designed such that when moving toward the destacker, the shuttle bin is straddled by the motor-driven belts of the magazine of the destacker, which slot in under the stack of postal items arranged edgewise in said shuttle bin, said magazine of the destacker also comprising a conveying portion that is mounted under the teeth of the magazine so as to be liftably movable.
