Abstract (en)

[origin: WO2017109655A1] Described is a machine for forming filter-bags containing infusion products comprising a folding station (4) designed to fold a piece (1) of filter paper comprising two receiving surfaces (5, 6) designed to receive the piece (1) of filter paper having surfaces mutually converging to define a channel (7) facing towards an underlying receiving carousel (8); a pair of gripping elements (9, 10) configured for folding and transferring the piece (1) of filter paper to the receiving carousel (8); two flat auxiliary walls (12, 13) movable between an operating position for receiving, wherein they are mutually coplanar and aligned to a line (L) for feeding and forming, and an operating position for releasing, wherein they are inclined towards the channel (7) defined by the two receiving surfaces (5, 6).
