Abstract (en)

[origin: WO2017108716A1] There is provided a container (10) for consumer goods (16), the container (10) comprising a housing (12) for receiving a plurality of consumer goods (16), the housing (12) comprising an aperture (18) for dispensing consumer goods (16) from the housing (12). First and second sealing flaps (20, 22) extend across the aperture (18) and are biased towards each other to form a seal across the aperture (18) for sealing the plurality of consumer goods (16) within the housing (12). The container (10) comprises a dispensing mechanism (28) for dispensing the plurality of consumer goods (16) through the aperture (18) when activated by a consumer, the dispensing mechanism (28) configured so that actuation of the dispensing mechanism (28) advances one of the consumer goods (16) between the first and second sealing flaps (20, 22) and through the aperture (18). The first and second sealing flaps (20, 22) are configured so that the first and second sealing flaps (20, 22) are biased towards each other after each of the consumer goods (16) is dispensed so that the consumer goods (16) remaining in the housing (12) are re-sealed within the container (10).
