Abstract (en)

[origin: WO2017108853A1] A re-sealable cuboid-like package for loose smokable material formed from a one-piece multilayer blank. The package includes a receptacle portion (6) for containing loose smokable material (4) with an access opening (28) and a flap (8) moveable between a folded position, in which the flap is folded at least partly around the receptacle and overlies the opening, and an extended position, in which the flap extends outwardly from the receptacle portion. A re-sealable cover layer (30) is attached to an inner surface of the flap (8) to enable movement of the layer between a closed position in which it covers the access opening and an open position in which the access opening is substantially uncovered, the cover layer being sealed in place by a repositionable adhesive.
