Abstract (en)  
[origin: WO2017108167A1] The invention relates to a sanitary outlet unit (1, 10), wherein flow-through channels (4) are formed in a jet former (3) in such a way that the flow-through channels are grouped around an axis (12) and that each flow-through channel (4) has a specified outflow direction (14), which is tilted both toward the axis (12) and perpendicularly thereto. The tilt toward the axis produces a converging jet pattern, and the tilt perpendicular thereto produces an additional optical effect (cf. Fig. 11).
