Abstract (en)

[origin: WO2017106887A1] The invention relates to a device for pressing a baseboard (4), which covers a connection joint (1) between a floor fitting (2) and a wall (3), against the wall (3), comprising a pressing head (7) which rests against the baseboard (4) and a support foot (6) for the pressing head (7), said support foot being supported against the floor fitting (2). In order to achieve simple handling conditions, the pressing head (7) and the support foot (6) are part of a clamping lever (5) which has a friction surface (11) on the support foot (6) side facing the floor fitting (2), and the support foot (6) forms a pivot bearing for the clamping lever (5), which is provided with a weight receiving area (12), in the clamping position of the clamping lever (5).
