Abstract (en)

[origin: WO2017108512A1] The invention relates to a drive device (10, 15, 16, 17, 20, 29) for a furniture part pivot assembly (8, 9, 18, 19) with which a furniture part (7) can be pivoted relative to a furniture body in a use state. The furniture part pivot assembly (8, 9, 18, 19) comprises a movement element (13, 24) which carries out a forward movement in the use state when the furniture part (7) is pivoted in a first direction, and the movement element (13, 24) carries out a backward movement when the furniture part (7) is pivoted in a second direction. The drive device (10, 15, 16, 17, 20, 29) has an electric drive unit (12, 17, 31) for acting on the furniture part pivot assembly (8, 9, 18, 19). According to the invention, a drive device (10, 15, 16, 17, 20, 29) transmission element (14, 23) is provided which can be coupled to the furniture part pivot assembly (8, 9, 18, 19) and which converts a linear movement that can be provided by the drive unit (12, 17, 31) into a forward and backward movement of the movement element (13, 24).
