Abstract (en)

[origin: WO2017108168A1] The invention relates to a drive train device having at least one electric motor (10), at least one axle drive (12), and a transmission (11) arranged between the electric motor (10) and the axle drive (12), which transmission has exactly one planetary gear stage (P1), one braking unit (B1), and one clutch unit (K1) and which transmission is provided, at least in terms of design, for the selection of two powershiftable transmission gears (V1, V2).
