Abstract (en)  
[origin: WO2017108189A1] The invention relates to a refrigerator and/or freezer device (10) comprising at least one carcass (11) and at least one closing element (20) that closes an opening of said carcass, as well as at least one profiled arrangement (1) which is arranged in a gap (19) formed between said closing element (20) and carcass (11) and which comprises at least one base (8), at least one securing arrangement (2), at least one sealing arrangement (3) and at least one profiled element (5). The invention is characterised in that at least one free end (51) of the profiled element (5) is arranged on the sealing arrangement (3) and at least one additional free end (52) of the profiled element (5) is connected to the base (8) by means of at least one movement arrangement (4) that at least partially projects into the sealing arrangement (3), said movement arrangement comprising two movement sections (40, 41) that are arranged approximately opposite one another.
