Abstract (en)

[origin: WO2017108973A1] The invention relates to a firework body (10), comprising at least a first receiving part (11) for a pyrotechnical effect (12) and at least one ignition means (13) connected to the pyrotechnical effect (12). According to the invention, it is provided that at least one positioning means (14) is arranged on the receiving part (11), wherein the positioning means (14) can be mechanically connected to the ignition means (13), whereby the ignition means (13) can be positioned at least in sections at a distance from the receiving part (11).
