Abstract (en)

[origin: WO2017108947A1] The invention relates to a transmitting assembly (100) for producing a signal pattern suitable for locating, which transmitting assembly comprises a first antenna (102) and at least one second antenna (104) spaced apart from the first antenna. A transmitting device (106) of the transmitting assembly (100) is designed to produce a known signal form and to transmit the known signal form by means of a transmission signal by using the first antenna and the second antenna (104).
