Abstract (en)

[origin: WO2017140844A1] The invention relates to an actuator (1) and/or switch apparatus (8) of a command or signalling device (7), wherein the actuator is provided for cooperating with a switch apparatus, wherein the switch apparatus is provided for cooperating with an actuator, and wherein the switch apparatus is configured in such a way that an electrically conductive connection can be established via switching and/or touching. The actuator and/or the switch apparatus are characterised in that an RFID element (4a - 4c, 5a - 5c) is provided on a component (2, 3) of the actuator and/or switch apparatus, wherein the RFID element has storage means in which information which relates to the command or signalling device and/or which can be read by individual parts of the command or signalling device is stored.
