Abstract (en)

[origin: WO2017111591A1] The invention relates to a low-power signal producing unit, in particular a sensor and control unit. The invention also relates to an assembly of at least one signal producing unit according to one of the foregoing claims and at least one signal receiving device configured to receive and to transmit and/or process the output signals produced by said signal producing unit. The invention further relates to a method for operating a low-power signal producing unit, in particular a sensor and control unit.
