Abstract (en)

[origin: WO2017109331A1] The present invention relates to a method for managing a capacitive keyboard fitted to a motor vehicle, the capacitive keyboard comprising a plurality of keys connected to an electronic control unit and having a tactile function, the method being characterised in that it comprises the steps consisting of: performing a capacitance measurement (C) for each of the keys; and temporarily deactivating the tactile function of the keyboard if, for at least one of the keys, the capacitance (C) is greater than or equal to a predetermined threshold value (C1). The invention also relates to a motor vehicle comprising a capacitive keyboard and an electronic control unit configured for implementing such a method.
