Abstract (en)

[Problem] Provided is a machine tool and cutting method that are able to machine the inclined surface of a workpiece with high accuracy. [Solving Means] A machine tool 100 for cutting a workpiece W having an inclined surface Wa includes a main spindle 10 that rotates while holding the workpiece W, a tool post 20 that holds a cutting tool T to cut the inclined surface Wa of the workpiece W, a mover 30 that relatively moves the workpiece W and the cutting tool T in a direction R including at least a Y-direction perpendicular to both a Z-direction parallel to an axis AX of the main spindle 10 and an X-direction that is perpendicular to the Z-direction and determines the amount of cutting of the workpiece W. The mover 30 includes a Y-direction guide 35 disposed on the tool post 20, the Y-direction guide 35 guiding movement of the cutting tool T in the Y-direction, and the Y-direction guide 35 has a guide surface 21a along a surface S2 perpendicular to a direction of a thrust force F2 that occurs when cutting the inclined surface Wa using the cutting tool T.
