Abstract (en)

[origin: EP3395582A1] The present invention relates to a print method involving a first carriage configured to move in reciprocation in a scanning direction and a second carriage configured to move in reciprocation in a scanning direction. The first carriage carries at least one print head and the second carriage carries a source of radiation. The speed of movement of the first carriage is increased with regard to the speed of the second carriage to improve the productivity of the print process.
