Abstract (en)  
[origin: EP3395741A1] Device for unlocking a lift parachute characterised in that it comprises: a first bracket (1) designed to be fixed to the guide rails, a second bracket (6) designed to be directly or indirectly fixed to a car or a counterweight, an intermediate bracket (2) the ends whereof are joined to the first and the second brackets in a tilting manner, such that it tilts with respect to axes and has the particularity that its length may be adjusted by means of an intermediate bracket (2) that comprises one or several threaded rods (4) equipped with a weld nut (5) or similar means which, when operated, cause a reduction in the length of the intermediate bracket (2). Thanks to this device, the car may be unlocked in a simple, easy, balanced manner.
