Abstract (en)
A system includes an operational subsystem including a plurality of mixers, wherein each mixer of the plurality of mixers corresponds to a different dispenser of a plurality of dispensers, and wherein each mixer is configured to mix two or more beer components of a plurality of beer components in accordance with a formula corresponding to the mixer to produce a corresponding beer product and provide the corresponding beer product to the dispenser corresponding to the mixer. The system also includes a control subsystem including a control module, wherein the control module is a computer system configured to provide to each mixer one or more control inputs that cause the mixer to mix the two or more beer components in accordance with the formula corresponding to the mixer.
