Abstract (en)

[origin: EP3396056A1] Tre present invention is directed to a soleplate for iron comprising a number of holes for steam emission concentrated next to the tip lower than 25. and a percentage value of the pressing portion of the soleplate compared to the soleplate total surface comprised between 30 and 80%, wherein for soleplate pressing portion is defined the portion matching the ironing surface. The soleplate according to the invention guarantees both a heavy steam current and a good steam distribution on the fabric, keeping a good ironing quality. These targets guarantee an optimal iron slipping on the fabric, making the ironing smooth and easy. The invention is also related to a steam iron comprising said soleplate.
