Abstract (en)

A device for adjusting position of a display screen, the device (400) comprising: a front support (480) for holding the display screen (210); motor means (750, 760, 770) for adjusting the inclination of the front support (480); characterized in that it further comprises: a pair of horizontal infrared (IR) sensors (221, 222) configured to be positioned in parallel to a horizontal axis of the display screen (210); a pair of vertical infrared (IR) sensors (231, 232) configured to be positioned in parallel to a vertical axis of the display screen (210); and a controller (710) configured to measure the intensity of a signal received from a remote control unit (240) by the IR sensors (221, 222, 231, 232), and control the motor means (750, 760, 770) depending on the signal intensity measured by the IR sensors (221, 222, 231, 232).
