Abstract (en)

[origin: WO2017117485A1] A contour sheet (100) having a mattress cover surface (102) and a plurality of side surfaces (104) are provided with at least one resilient member (106) extendible in a vertical direction along the depth of a mattress in at least a portion of one of the side surfaces (104). Alternatively, sets of resilient members (106) sandwiched between one or more layers of fabrics can be provided to prevent direct exposure to heat and other detrimental conditions that the contour sheet may be subjected to during routine wear and laundry. A method of making such a contour sheet (100) can include steps of cutting a generally polygonal shaped cut-out to form an opening at the corners (108) of a base fabric, coupling at least one resilient member (106) along at least one edge of the opening and sewing adjacent edges of the opening together.
