Abstract (en)  
[origin: WO2017117502A1] A net assembly includes a base having hub and at least three extension arms, wherein the extension arms extend from the base hub to form a polygon. At least one flexible support pole is removably coupled to each of the extension arms of the base, and a net is configured to receive each of the flexible support poles. The net comprises a plurality of panels which define a polygonal cross-section. The net bends each of the flexible support poles such that the each of the poles is in a flexed state and wherein in the flexed state, each of the flexible support poles is adapted to exert an outward force onto the net, thereby exposing each of the plurality of panels of the net.
