Abstract (en)  
[origin: WO2017017286A2] The claimed pneumatic cleaning gun (10) comprises a gun housing (100) with a compressed air connection, a fluid nozzle (130) with a nozzle cover (200) and an air intake tube (300) which leads into the covered flow channel (221A) and can also be connected to a suction device by means of a suction tube (30) in order to suction dirt particles through the flow channel (221A). Depending on the use, the cleaning gun (10) can interfere with the work of the suction tube (30) when it hinders the intended cleaning operation. Said disadvantage is eliminated by the invention by the fact that the cleaning gun (10) is improved such that the air intake pipe (300) is not rigid but pivotably mounted on the cleaning gun (10). The air intake pipe (300) can therefore be mounted in different positions of use such that the user can find the most comfortable or convenient position of use and the air intake tube (300) can be correspondingly adjusted.
