Abstract (en)
[origin: WO2017114591A1] The invention relates to a tube-emptying device (1), consisting of an upper part (2) and a lower part (3), which are connected by means of an axis of rotation (19), wherein an upper roller (6), having an axis (21) and a rotary handle (4), is arranged for rotation on the upper part (2) and a lower roller (5), having an axis (20), is arranged for rotation on the lower part (3) and a tube can be fed between the rollers (5, 6), wherein, in the working position of the tube-emptying device (1), the axis of rotation (19) and the two axes (20, 21) of the rollers (5, 6) lie approximately in alignment on a common arrangement axis (23).
