Abstract (en)

[origin: WO2017114543A1] The invention concerns a transverse member (1) for a drive belt (50) for a continuously variable transmission comprising at least one endless carrier (8) and a number of such transverse members (1), which transverse member (1) comprises a base part (10) and two pillar parts (11) that are respectively provided on a respective side of the base part (10) thereof and that define an opening (5) of the transverse member (1) there between, with a first one of the two pillar parts (11) comprising a hook part (13) that extends in axial direction over a part of the base part (10). According to the invention a part of a side face (20) of the other, second one of the two pillar parts (11) is inclined away from the first pillar part (11) in a direction towards the base part (10).
