Abstract (en)
[origin: WO2017116327A1] This invention is about the innovation of bassoon- a wind instrument- by using one single-bocal (1) for tuning and thus facilitating the tone adjustments. The characteristic of this invention is that single-bocal bassoon (1) contains an adjustment member placed between bocal (2) and the reed (4) and can move back and forth. This movement creates low and high pitched sounds necessary for the tuning process. The adjustment member can be fixated when appropriate position is found (3).
